ARE MUCH ALIKE

Cowpeas, Soy Beans and Velvet Beans Have About Same Climatic Adaptations.

COMPARISON MADE OF CROPS

Among Important Points in Determining Value of Legume Are Its Value for Forage and Its Ability

to Supply Nitrogen. ment of Agriculture.) value of a leguminous crop are its planting has been started. and the value of the seed as a cash crop or for its utilization on the farm. become like overcrowded vegetables in climatic adaptations as corn, and good gardener will pull some of the therefore its culture is much more ex- vegetables in a garden that have tended than that of either the cowpea reached this condition. When trees

can be grown successfully not only there, but throughout the cotton belt DEVICE FOR CLEANING GRAIN and the lower half of the corn belt. The velvet bean and cowpea are quite sensitive to cold, whereas the soy bean withstands considerable frost in spring and fall. Cowpeas and velvet beans both succeed on poor soils better than the soy bean. For soil improvement the velvet bean is, in general, superior to either the cowpea or the soy bean, although the cowpea succeeds under a greater diversity of

conditions. The soy bean is to be preferred for forage purposes on account of its upright growth. The cowpea and velvet bean are viny plants and therefore more difficult to harvest and cure. As a grazing crop for cattle and hogs in fall and winter the velvet bean cannot be excelled. However, the cowpea and soy bean can be grown over a more extended area, and some of their numerous varieties furnish

earlier pasture. For the production of seed, the soy bean has many advantages over the cowpea and velvet bean. The sov bean matures all its seed at one time and can easily be handled by machinery. Hand picking is most commonly practiced in gathering cowpea seed. although machinery can be used to advantage. It is necessary to pick A Vertical Longitudinal Section of the velvet beans by hand because of the abundant, tangled mass of vines. and soy beans are all excellent feed erwise improved, which is simple in feed, but it is extensively used, espe- order, or require lubricating.

cially in the Southern states, for huto its value for feed, is valuable for use for human food is increasing. The cowpea will undoubtedly continue to be one of the most important eguminous crops in the Southern man food are obtained.

Discovered That Solutions Applied to tle Insects.

A series of tests to determine the effect of spray solutions on honey bees is to be undertaken by the California College of Agriculture, following the discovery that heavy spraying of ap- and the usefulness of the work horse ple trees when they are in bloom has must have more attention. The high resulted in great loss to bees seeking prices asked for horses of good size nectar. It is pointed out that bees and ample form make it necessary for are the orchardists' best friends, as farmers to get more and better servthey help pollenization.

SOIL IS IMPROVED BY LIME In Caustic Form It Flocculates Land, Bringing About More Ganular Condition.

The tilth, or friable condition, of the soil is improved by the presence of lime. Lime, especially in the caustic brings about a more granular and taining weak germs or from those porous condition.

Exercise Is Essential. If hens are allowed to get whole.

Care for Seed Corn. Are you taking care of that good seed corn you hand picked last fall? The main point is to keep it extra ity for 25 years. To down weeds keep
